

## Optical dissolve oxygen probes. 4/20 mA and RS 485 output.

These unique probes have been designed to measure dissolved oxygen based on fluorescent technology. The probes are available for submersible and in-pipe installations.

The measuring system consists of:

- optical device complete of fluorescent material,
- d.oxygen and temperature measuring circuit,
- 2-wire 4/20 mA analog output,
- RS 485 digital output,
- nozzle for the autoclean by external pressure air (OD 8325).

The measuring is provided in ppm or % of air with automatic temperature compensation.

Through commands from the Personal Computer hyperterminal, the serial interface allows the d.oxygen and temperature data transmission, the ppm or % of air scale selection, the configuration of pressure, salinity and R.H compensation, the zero and sensitivity calibration.

Thanks to its 4/20 mA isolated output, the probe can be directly connected to a PLC or data logger.

The probe can be connected to B&C Electronics controller BC 7335, BC 7635, BC 7635.010, BC 7687 or BC 6587, which provide the power, the measuring readout, 2 set-points, alarm relay and the holding function for an external cleaning cycle.

The most common applications of this probe include: water quality monitoring, municipal and industrial water treatment and aquaculture.

### Principle of operation

A light beam of a specific wavelength is sent to a special fluorescent layer in contact with the sample.

The absorbed light energy is partially released as a light pulse with an higher wavelength.

This phenomenon is called fluorescence.

If oxygen molecules are in contact with the sensing layer, the fluorescing is reduced (quenching).

By measuring the amount of quenching it is possible to determine the oxygen concentration.

### Technical specifications

**Scale:** 0/20 ppm - 0/200 % air

**Sensitivity:** ± 0,5 % of the scale

**Response time:** 95% in < 60 seconds

**Power supply:** 9/36Vdc

**Analog output:** 4/20 mA isolated current Loop

**Load:** 600 Ω max. at 24Vdc

**Digital output:** RS 485

**Temperature compensation:** automatic

**Secondary parameters:** pressure, salinity, RH

**Room temperature:** -5/50 °C

**Max. pressure:** 1 bar at 25 °C (OD 8325); 6 bar at 25 °C (OD 8525)

**Autoclean:** by pressure air 3 bar max (OD 8325)

**Dimensions OD 8325:** L=165 mm total, D= 60 mm

**Dimensions OD 8525:** L=143 mm total, D= 40 mm

**Body:** PVC

**Cable:** 10 m (100 m max.)

**Protection:** IP 68

The technical specifications may be changed without notice

### Accessories

**BC 8701** RS485/USB converter for power supply through PC connection

**OD 8391** Optical sensing element replacement kit

### Accessories for OD 8325

## Turbidity probes. 4/20 mA and RS 485 output.

These unique probes have been designed to measure turbidity based on nephelometric method (ISO 7027 – EN 27027). The probes are available for submersible and in-pipe installations.

The measuring system consists of:

- Infrared light source,
- 90 degree scattered light detector,
- Detector of the clean lens status,
- 2-wire 4/20 mA analog output,
- RS 485 digital output
- Nozzle for the autoclean by external pressured air (TU 8325).

Through commands from the Personal Computer hyperterminal, the serial interface allows the measuring and check signals transmission, the scale selection, the analog or digital operating mode selection, the zero and sensitivity calibration.

Thanks to its 4/20 mA isolated output, the probe can be directly connected to a PLC or data logger, and configured in NTU, g/l, % or other.

The probe can be connected to B&C Electronics controller BC 7335, BC 7635, BC 7635.010, BC 7687 or BC 6587, which provide the power, the measuring readout, 2 set-points, the alarm relay and the holding function for an external cleaning cycle.

The most common applications of this probe include: water quality monitoring, municipal and industrial water treatment and aquaculture.

### Principle of operation

The turbidity follows the back nephelometric method (ISO 7027 – EN 27027).

A light beam is sent to the sample through an optical lens.

The 90 degree scattered light by suspended particle is collected by the probe through a second lens and it is converted in an electric signal proportional to the turbidity of the sample.

The probe uses an infrared light and the measuring is not affected by the color of the sample.

## High turbidity and suspended solids probes. 4/20 mA and RS 485 output.

These unique probes have been designed to measure to measure high turbidity and suspended solids based on back scattering technology.

The probes are available for submersible and in-pipe installations.

The measuring system consists of:

- Infrared light source,
- Detector of scattered light by suspended particles,
- Detector of the clean lens status,
- 2-wire 4/20 mA analog output,
- RS 485 digital output
- Nozzle for the autoclean by external pressured air (TU 8355).

Through commands from the Personal Computer hyperterminal, the serial interface allows the measuring and check signals transmission, the scale selection, the analog or digital operating mode selection, the zero and sensitivity calibration.

Thanks to its 4/20 mA isolated output, the probe can be directly connected to a PLC or data logger, and configured in FTU, g/l, % or other.

The probe can be connected to B&C Electronics controller BC7335, BC 7635, BC 7635.010, BC 7687 or BC 6587, which provide the power, the measuring readout, 2 set-points, the alarm relay and the holding function for an external cleaning cycle.

The most common applications of this probe include: water quality monitoring, municipal and industrial water treatment and aquaculture.

### Principle of operation

The turbidity and suspended solid measurement follows the back scattering method.

A light beam is sent in the sample through an optical lens.

The back scattered light by suspended particle is collected by the probe through a second lens, detected and converted in an electric signal proportional to the turbidity of the sample.

The probe uses an infrared light and the measuring is not affected by the color of the sample.
